

UFO USER INSTRUCTIONS

1. Select a vessel that the UFO seal will fit over. Place the UFO rubber side down on the rim of the vessel.
2. Fill the vessel with enough water to bubble through, but be careful not to fill too much as to bubble up onto the UFO itself. Doing so may result in water intake to the draw stem.
3. Select one of your appropriately-sized down stems for the proper depth into the vessel and gently fit the down stem into the center hole in the bottom of the UFO.
4. Gently connect the draw stem to the off-center hole in the top of the UFO.
5. Attach the Launch Box or Muad-Dib whip end to the center hole on the top side of the UFO.
6. Engage your battery or Power Adapter to the Launch Box or Muad-Dib.
7. Draw, bubble, enjoy.
8. Lift the UFO lid slightly to clear vapor from the vessel.
